

Corporate Campus Safety

Ensuring a safe environment for your employees, visitors, and assets is a top priority for your organization. In particular, large campuses with multiple facilities, different locations, and complex infrastructure present unique challenges due to their size and diversity. Without the right tools and procedures, emergencies can quickly escalate into major disasters.

A key pillar of any effective public safety strategy is a mobile incident response capability. Effective incident response requires standardized processes, clearly defined roles, persistent situational awareness, and effective communication. Achieving these objectives demands a solution that simplifies operations while also empowering both supervisors and field responders.

Response for FirstNet offers proven capabilities to help you successfully manage these challenges for the most effective incident response.

Response for FirstNet automates processes while enhancing awareness of ground assets. It also enables mutual aid through quick integration and collaboration with local public safety teams as-needed.

Mutual Aid Capability

Enables different organizations to collaborate by combining their operations into a single, unified channel for seamless coordination during events.

Response for FirstNet is a low-cost, simple-to-use web and mobile software solution that creates a unified and integrated operational view for both practitioners and management. The tool can be used for both day-to-day communication as well as incident response. In particular, the solution quickly mobilizes an emergency response team while providing all responders with critical incident information using various collaboration surfaces. Lastly, Response for FirstNet is a workforce multiplier that can ensure your team can perform in resource-constrained events.

Communicate, Collaborate, and Coordinate with Intrepid Response

- Automate incident response to improve reaction time and safety for responder personnel and the public at large.
- Maintain direct communication and collaboration with external Law Enforcement, Fire, and EMS teams while staying dedicated to providing immediate front-line response during campus emergencies.
- Streamline the management and sharing of security/safety plans and automate task management, operating procedures, and checklists for improved efficiency.
- Share unusual or suspicious activity that may indicate an evolving security and safety incident.

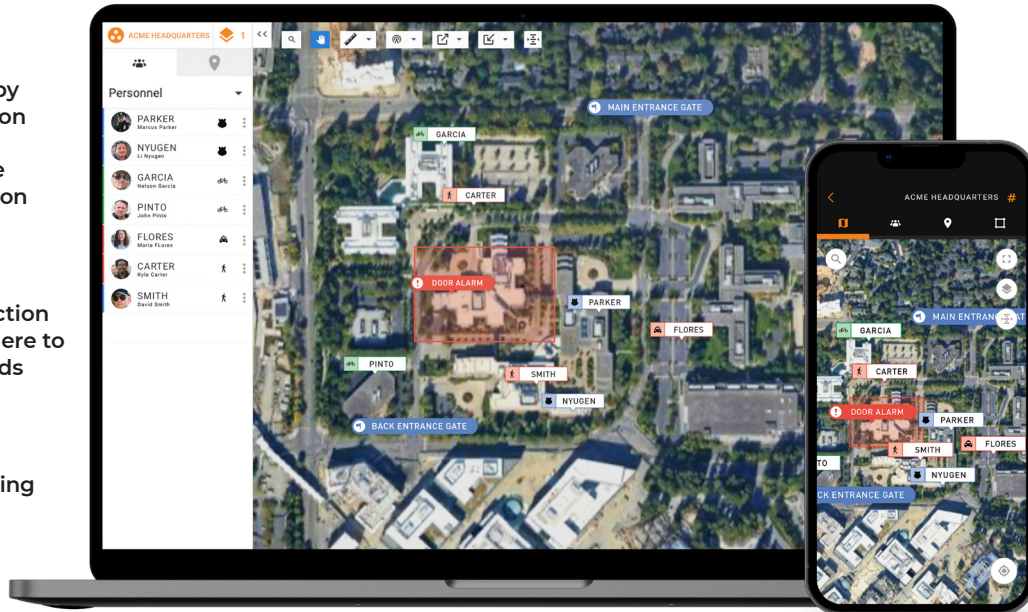

Intrepid **RESPONSE** for FirstNet®

A unified campus safety solution that enables large and small teams to efficiently coordinate and organize incident response with utmost speed and accuracy. Enables more informed, faster decisions with the most relevant, insightful, and up-to-date information. Ensures teams stay coordinated in their actions at all times, while providing breadcrumbs and visibility of the location of people, assets, and static/dynamic items of interest.

Channels reduce cognitive burden by tailoring information flows so that each team gets only the required information when needed

Mobile Incident Management & Action Planning that adhere to FEMA ICS standards

Live Location of personnel with Breadcrumb tracking

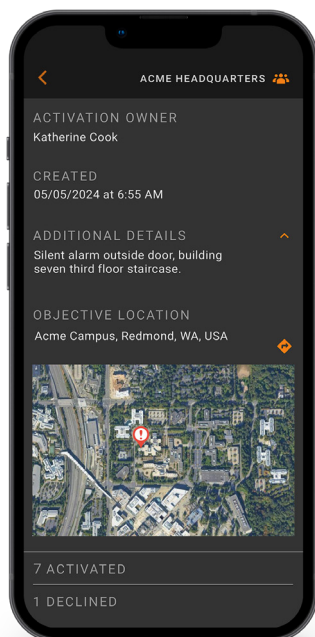

Mutual Aid channels to coordinate with Public Safety agencies

Attach up to 6 photos or PDF docs to map markers

After action reporting

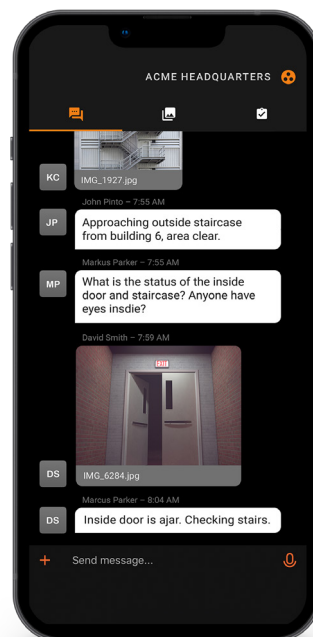

FedRAMP authorized to comply with Federal, State and local security requirements.

Emergency Team Notifications

Get vital incident details before you arrive on scene.

Activate and mobilize your team with just a few clicks on web or mobile devices.

Communication & Digital Media Exchange

Share photos, video, web links, text messages and collaborative documents.

Establish clear responsibilities with automated task management.
