

Standard With Every
Intrepid Response Deployment

Intrepid Integration Hub

One Unified Operational Platform for Every Mission-Critical System

Public safety agencies depend on a growing ecosystem of technology, from CAD and GPS trackers to drones, identity providers, mapping platforms, and intelligence systems. Each plays an important role, but too often they operate independently, forcing responders to switch between applications, rely on radio updates, or wait for critical information to reach the field.

Integration Hub brings together mission critical operational technologies into a single, unified platform. By integrating GPS tracking, mapping, identity services, CAD, and other mission-critical systems, drones, Intrepid Response provides command staff and field personnel with a shared operational picture, enabling coordinated response, real-time decision support, and seamless interoperability across units and partner agencies.

Key Capabilities

One Platform. Connected Operations.

- **One-Click Integrations:** Skip the IT overhead. Enable supported integrations in minutes through Response Admin, without separate installations or ongoing maintenance.
- **Ready Today. Built for Tomorrow:** Connect across eight integration categories today, including Location, Drone, Authentication, Calendar, Platform, Data Warehouse, Mapping, and Tracker, with new integrations continuously being added.
- **Protect Your Technology Investments:** Your agency has already invested in CAD, video management systems, mapping platforms, identity providers, and analytics tools. Integration Hub doesn't replace them, it extends their value by bringing operational data together in one mobile-first experience.
- **Deliver Intelligence to the Edge:** Drone locations, tracker data, secure authentication, map overlays, and operational intelligence flow directly to field personnel in real time, improving situational awareness when every second counts.
- **Future-Proof Your Operations:** Operational needs evolve, and your technology should evolve with them. Integration Hub provides a flexible framework that grows alongside.

Phase 1 Integrations

Skydio Drone	Live drone feeds surface directly in Locate, so pilots and ground teams share one real-time picture.
TRAX / 3Si Covert / Ensurity Tracker	Covert tracker pings appear alongside team locations, no separate app to monitor.
TAK / ATAK / iTAK / WinTAK Platform	Bidirectional sharing of locations, markers, and shapes with military, National Guard, and federal task forces.
Coreforce / STRAX Platform	Two-way data flow between Intrepid Response and sophisticated intelligence platforms.
Azure Entra ID Authentication	Corporate SSO with MFA built in, removing the top IT objection that slows procurement.
Intrepid API Platform	The foundation for custom integrations and third-party extensibility.
CRG Floor Plans Mapping	Pre-loaded building layouts - exits, utility rooms, hazards - visible before crews arrive on scene.

Integration Hub is Standard with every Intrepid Response deployment at no additional cost and is available to every Organization Administrator. There are no separate marketplace licenses or platform fees.

Some integrations that introduce additional operational data, such as drone locations or tracker feeds, may require expanded Locate licensing for users or devices generating those location updates.

Integration Hub isn't a one-time feature release. It's a growing integration ecosystem designed to evolve alongside the public safety technologies your agency relies on. Upcoming roadmap integrations include Okta Authentication, Google Authentication, Calendar Synchronization, Data Warehouse Exports and more.

As new technologies emerge and operational requirements change, Integration Hub continues to grow, ensuring Response remains the connective layer for your agency's evolving technology ecosystem.
